## **Greenerwave joins Telespazio France's Catalogue as part of the EU SATCOM Market Program of the European Defence Agency (EDA)**

**Greenerwave, the deep-tech startup specializing in electromagnetic wave control, and Telespazio France, the European leader in satellite services, announce the integration of Greenerwave's solutions into the EU SATCOM Market Catalogue. This program, run by the European Defence Agency (EDA), aims to simplify and accelerate access for armed forces and European agencies to satellite communication solutions, ensuring strict standards of performance, security, and reliability while supporting cooperation between European Union member states in the defense sector.**

By joining the service catalogue offered by Telespazio France, Greenerwave gains enhanced visibility and direct access to a broader European clientele with growing needs for satellite communications and security to support their operational missions. This significant milestone in Greenerwave's development now allows the company to offer its energy-efficient cutting-edge solutions to the European defense market.

The integration of Greenerwave's innovative solution into Telespazio France's EU SatCom Market Catalogue reflects a shared commitment to enhancing interoperability, resilience, and security of satellite communications for defense and security missions in Europe.

Through Telespazio France's service offerings, which hold the framework contract for the EU SATCOM Market, Greenerwave is now positioned as a key player in Europe's technological and strategic sovereignty. This collaboration between Telespazio France and Greenerwave highlights the quality, innovation, and reliability of the solutions developed by both companies.

*"Joining Telespazio France's EU SatCom Market Catalogue is a key step for Greenerwave, showcasing our ability to provide user terminals that are not only innovative but also optimized for energy efficiency and performance", said Geoffroy Lerosey, CEO and co-founder of Greenerwave. "In a turbulent geopolitical context, we are proud to actively contribute to European security and sovereignty."*

Pierre GLATT, Sales Director at Telespazio France, said, *"We are delighted to welcome Greenerwave to the EU SATCOM Market Catalogue, a strategic program for European armed forces in the field of satellite communications solutions. The integration of Greenerwave underscores our commitment to promoting increasingly innovative, high-performance, and secure European technologies, thereby strengthening the resilience and effectiveness of critical communications in Europe."*

### **Greenerwave, how does it works ?**

Greenerwave designs intelligent surfaces composed of elements that "shape" electromagnetic waves, enabling the creation and control of directional beams. These advanced metasurfaces consist of centimeter-sized elements called "pixels," which function like a set of micromirrors. The interactions between the pixels and microwaves are controlled by physics-driven algorithms, steering the waves after their reflection on the surface. Passive, affordable, and easy to produce, this technology optimizes the use of electromagnetic waves while drastically reducing antenna energy consumption and lowering production costs.

### **About Telespazio France:**

Based in Toulouse, Bordeaux, Paris, and Kourou, Telespazio France is a subsidiary of the Telespazio group, a joint venture between Leonardo (67%) and Thales (33%) and a key player in space infrastructure operations and value-added satellite services. With more than 30 years of experience and nearly 500 employees, this French subsidiary of the international group covers all historical space domains, including telecommunications, Earth observation, and navigation, but also addresses emerging markets such as micro-launchers, space surveillance, or in-orbit services. With over 150 people at the Guiana Space Centre, Telespazio France is also the leading industrial partner at the Kourou base, providing daily maintenance and operation of ground infrastructure facilities.
